CIA-2 Examination -April/May/Nov/Dec 2023

Register No.: 212221230049

Branch & Sem.: B.Tech - AIDS of V

Date: 1.11.23

Sign of the Invigilator: 

Subject Code & Subject Name: 19AI505 - Reinforcement Learning

Part - B

6. B. Develop a Python code to collect experience by running an episode of a given environment (generate trajectory) and decay schedule for Monte Carlo control.
7. A. Monte Carlo control often involves exploration/exploitation strategies like epsilon-greedy policies. How do you balance exploration and exploitation using various techniques and what role does this balance play in the convergence and performance of Monte Carlo control algorithm?

Part - C

8. B. Develop a program for Monte Carlo prediction to estimate the state-value function of a 5-state slippery walk environment.

Note: Assume the decay-schedule and generate-trajectory functions are given.
